

EQUIPMENT DATA SHEET - 5

TURNTABLE UNIT

- Unit constructed with a fully fabricated and machined box section support frame.
- Unit manufactured to operate up to 2500Kg combined transfer pallet/component weight.
- Components transferred by a section of powered roller conveyor (see date sheet 1).
- Unit conveyor section is located on precision machined slewing ring bearing allowing the components to be rotated to 90 or 180 positions..
- Unit operated with a electric geared motor engaging the slewing ring via gear pinion for rotational movements.
- Incorporating damper devices, to decelerate table during rotation function.
- Operating switches to indicate forward / return positions.
- Assembly supplied with all necessary guarding panels for safe operation.
